

The two-bit counter counts mod 4 under the real Han oscillator

Certified | 28 read windows over 300 h | sequence 123012301230... | bit 1 setup 4.64 h / hold 2.91 h | minimum commitment 1.00

Model: 34-state two-bit counter (model_twobit34.py), deterministic ODE, no noise term

Input: Han oscillator C31 translation flux -- the real upstream, coupled one-way at the unloaded limit ($\rho = 1$)

Parameters: $uM_per_au = 5.75$, carry A/F maturation = 32.5 min, carry mRNA = 2 min, clock = 0.3 / 2.0, extra dilution term = 0 (selected_profile.json)
